Experience

Founding Engineer Zenskar **Oct 2023 - Present**

- **Shipped a Go-based event delivery service**, using the transactional outbox pattern to guarantee at-least-once delivery, with sharding, connection pooling, and database advisory locks.
- **Architected an internal AI platform** integrating Claude agents and RAG across HubSpot, Slack, and Avoma, with role-scoped isolation, database RLS, and Hindsight-powered retrieval.
- **Modeled contract execution** for Zenskar's python-based pricing engine, validating the design against 60+ production billing scenarios and 12 competitor platforms affecting 10+ enterprise customers.
- **Delivered the v3 pricing engine's pricing nodes end-to-end**, processing 29K+ contract executions/month at sub-15ms p99 latency in production.
- **Co-built the billables engine in Python** powering invoice line-item generation, owning snapshot/delta calculations and saga-based recovery for partial failures.
- **Built Zenskar's HubSpot integration**, letting clients connect their HubSpot account, syncing customers, products, and contracts bi-directionally and eliminating manual data entry.

Full Stack Engineer - Intern Zenskar **May 2023 - Sep 2023**

- **Launched Zenskar's first customer billing portal**, covering subscriptions, invoicing, and RBAC-secured access from initial architecture through production CI/CD.
- **Implemented Lexical Editor support** for customizable email/document templates, introducing Zenskar-specific nodes for dynamic data population.

Software Developer Intern Fineswap **Feb 2022 - Apr 2023**

- **Built the [swa.ps](#) marketing site** in FreeMarker and Kotlin, showcasing app content and improving SEO.
- **Improved app performance** with a custom component library built on Flutter's native widgets.

GSoC Contributor Python Software Foundation **May 2022 - Sep 2022**

- **Contributed to Intel's [CVE Binary Tool](#) through Google Summer of Code**, fuzzing XML and JSON vulnerability report outputs with Google Atheris.
- **Extended SBOM output with a new mode and richer metadata**, backed by pytest suites reaching 90%+ coverage.

Education

Cluster Innovation Centre, University of Delhi **Aug 2019 - Jul 2023**
Bachelor of Technology in Information Technology and Mathematical Innovations **CGPA: 9.14**

Projects

Renzoku MCP Bridge | TypeScript, Model Context Protocol, WebSockets, Node.js **May 2026**

- **Built a cross-network MCP bridge** exposing device verbs (notifications, clipboard, device listing) as MCP tools any client (Claude Desktop, Cursor) can invoke against a device on a different network.
- **Designed a transport-agnostic envelope protocol** with source/target routing and correlation IDs; a WebSocket relay multiplexes requests across a device registry with heartbeat liveness and auto-reconnect.
- **Hardened verb execution against shell injection** via execFile arg-arrays over Streamable HTTP MCP transport; verified end-to-end across networks against remote devices.

Technical Skills

Languages: Python, Go, C++, TypeScript, JavaScript, SQL
Tools/Frameworks: AWS, Terraform, React, Node.js, NextJS, Flutter, Vitest, Cypress
Databases: PostgreSQL, MySQL, MongoDB, CockroachDB, Firebase

Leadership / Extracurricular

- **Led 5 developers** on a freelance iOS social/events platform for Stanford students.
- **Selected for Girlsript Summer of Code in 2020 and 2021** with Project Simulate, mentoring 80+ students in both cohorts.
